

## Preface

I am pleased to introduce the inaugural edition of the *Majestic American Journal of Chemistry* with great honour and enthusiasm. The creation of this journal marks the start of a new publication but demonstrates a dedicated effort to advance chemical science through stringent scholarship, interdisciplinary cooperation, and global academic interaction.

The term "central science" correctly describes chemistry because it connects all scientific fields discovered by its fundamental research, enabling their growth. Chemistry's vital role in leading discovery and innovation has become essential because our world confronts historic scientific and societal challenges, including climate change and public health emergencies.

The *Majestic American Journal of Chemistry* emerged from an idea to develop a publication platform that features elite peer-reviewed scientific studies dedicated to every aspect of chemistry. Our mission is to boost the scientific outreach of researchers who lead frontier investigations across academic, industrial, and new emerging research groups.

Modern chemical research extends from various study dimensions, which the journal presents in its first volume through different articles. Results in this publication demonstrate the journal's commitment to scientific quality research alongside global usefulness.

I am expressing my sincere appreciation for the authors, the reviewers, and the editorial board members due to their combined dedicated work that created the inaugural publication. We appreciate all our audience members accompanying us on our exciting mission. Your investigative nature and critical assessment will shape the development of future publications along with sustained participation.

The first volume establishes the foundation we strive to develop into a sustained, substantial scientific offering for the international scholarly community. The platform invites exploration, critical questions, and knowledge expansion from all visitors who access it.
