

Preface

It is a great honor for me to announce that we are releasing the first volume of the *Majestic Journal of Information Technology (MJIT)*. Our goal is to create our journal a place where researchers and practitioners can share research and innovation ideas, research papers, abstracts irrespective of if it belongs to academic or industry.

As we all are aware, IT industry is evolving rapidly and after AI and machine learning, change is much quicker than expected. Few years back, AI, machine learning, Cloud computing, security and networking and other sectors used to be considered separately, but with today's world all such technologies are overlapping with each other.

With these challenges, I can happily say that first volume of our journal covers various themes. This volume will bring multiple tools and methods used in education and development and simulation of digital transformation.

All manuscripts of this volume will reflect an approach towards today's technological research and information. All cover different areas but share common focus on emerging technologies and address complex issues and problems. Manuscripts under our first volume will provide insights to our readers and will inspire other researchers and readers to contribute to this field and journal.

I would like to thank all the authors, reviewers and editorial managers for their work and feedback, including editorial team for their support and dedication to help us to publish the very first chapter of our journal

I am happy to share first volume of *Majestic Journal of Information Technology (MJIT)* for our readers, scholars and professionals, I am looking forward to the continuous improvement and development of this journal and support from editorial managers, authors and reviewers. We would love to see your valuable feedback and comments to improvisation and advancement of our journal.

Sincerely,

Dr. Rajeev Kumar Arora

Editor-in-Chief

Independent Scholar, USA
